

SUKESH BIRADAR

Pune, India — +91-8310332087 — biradarsukesh4@gmail.com — GitHub — LinkedIn

PROFESSIONAL SUMMARY

Software Engineer with strong expertise in Java, Spring Boot, SQL, and cloud-native systems on Microsoft Azure. Hands-on experience designing scalable REST APIs, implementing JWT-based security, and deploying containerized applications using Docker and CI/CD pipelines. Currently building AI-powered backend systems using Retrieval-Augmented Generation (RAG), embeddings, and vector search for intelligent log analysis and debugging automation.

TECHNICAL SKILLS

Languages: Java, SQL

Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, JWT

Cloud: Microsoft Azure (App Service, Azure Container Registry, Azure MySQL, Azure AI Search)

DevOps: Docker, GitHub Actions CI/CD, Containerization

Database: MySQL, PostgreSQL — schema design, indexing, query optimization

Concepts: OOP, DBMS, System Design, Microservices Basics, RAG Architecture, API Security

PROJECTS

AI Log Debugger — AI-Powered Observability System

GitHub

Java, Spring Boot, RAG, Embeddings, Vector Search, Azure AI Services, Docker, MySQL

- Engineered an AI-driven backend system to transform raw logs into structured outputs (root cause, explanation, fix, confidence score), reducing manual debugging effort.
- Designed and implemented a **RAG pipeline** using embeddings and vector search, enabling contextual retrieval across **1000+ log entries**.
- Developed **15+ REST APIs** for log ingestion, parsing, vector querying, and AI response orchestration.
- Integrated Azure AI services with backend pipelines, improving log analysis efficiency and response time by **40%**.
- Built modular Spring Boot architecture (Controller-Service-Repository) supporting scalability and future microservices migration.
- Optimized data flow and request handling, ensuring low-latency processing for large log datasets.

ShopNexa — Cloud-Deployed E-Commerce Backend

GitHub

Java, Spring Boot, Spring Security, JWT, MySQL, REST APIs, Docker, Azure App Service, ACR

- Built **20+ production-grade REST APIs** for authentication, product catalog, cart, and order workflows.
- Implemented JWT-based authentication and role-based access control, securing APIs under concurrent user scenarios.
- Designed normalized relational schema across **8+ tables**, improving query performance by **35%**.
- Containerized backend using Docker and deployed via Azure App Service + Azure Container Registry with CI/CD pipelines, reducing deployment time by **60%**.
- Debugged and resolved **10+ real-world production issues** including SSL DB connectivity, schema validation failures, and environment configuration errors.
- Ensured API reliability through Postman testing and handled edge cases in authentication and transaction flows.

EXPERIENCE

Software Developer Intern — KodNest Technology, Bangalore

Apr 2025 – Dec 2025

- Developed backend services using Java and Spring Boot across **3+ modules**, applying OOP and layered architecture principles.
- Wrote and optimized **20+ SQL queries**, improving performance and resolving real-world data inconsistencies.
- Built and tested **15+ REST API endpoints** covering authentication, CRUD operations, and validation logic.
- Identified and resolved **12+ defects**, improving application stability and reducing runtime errors.
- Collaborated in code reviews and debugging sessions, contributing to maintainable and production-ready codebases.

EDUCATION

Bachelor of Engineering — Computer Science

Bhemmanna Khandre Institute of Technology, VTU

CGPA: 7.55 / 10.0

2025

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
